

Drum Handler – Quick Attach/Release Hook System.

The Quick Release Drum Lifter and De-palletiser is suitable for lifting most types of drums from pallets or the floor and safely transporting them onto a drum dolly for example.

This Drum Lifter handles the drums by gripping the lip of the drum, with the 'drum grab' attachment, for a safe and reliable pick up.

The quick attach/release hook system offers a powerful lifting mechanism for any drum with a 'lip' on the top of the drum for the attachment to grip, including steel open top and tight head drums and plastic 'L' ring drums.

The 'drum grab' attachment can lift drums up to 500kg or 1102lbs.

This Drum Handler attachment model is designed to suit the carriage on the 'Logitrans' Lifter. The attachment can be secured to the stacker using the 'Quick Attach Hook System'. The Logitrans Lifters have the options of Straddle Legs to transport the drums from pallet to floor, and V-Type Legs to access the corner of pallets.

The gripping head automatically grips the drums on the top rim as the unit is raised. The drums are released by lowering to the floor and reversing the lifter away.

The attachment is finished in hard wearing blue gloss powder coat.
